Again, the printer also comes with several print options to choose from to get your desired results. For example, users can pick between different photo

paper settings or select borderless printing options when their images are transformed into high-quality margin-less photos.

## **5 Maintenance Tips for HP sublimation printer**

It is very important to take very good care of your best HP sublimation printer, for this reason we are adding five (5) maintenance tips to keep your [HP sublimation printer](#) in good shape for years.

### **01. Clean nozzle-heads regularly:**

For sublimation printers and models, clogging of print heads is a common issue. Therefore, the most important aspect is keeping the print heads clean. Make sure to clean the print head regularly to avoid the head from getting clogged often.

### **02. Prevent Wastage of Ink in sublimation printing machine:**

Maintenance of a sublimation printer usually results in wastage of ink. With every cleaning of the machine, it needs some amount of ink in order to function well.

To prevent ink wastage, have a waste collection tank. Some printers have in-built tanks but most [HP sublimation printers](#) don't, in order to keep your printer waste free keep a waste bin along.

### **03. Influence of Temperature on sublimation ink:**

Sublimation inks require certain humidity and temperature specifications for storage that is proper and dry. The recommended temperature for the storage of ink sublimation ranges between 15 to 25 degrees Celsius, and the relative humidity should be more than 35%.

### **04. Keep your Workshop clean:**

Keep your workshop clean, and your transfer paper clean during printing with this sturdy workspace. Complete with both a lower shelf and four casters for flexible, yet stable storage.

If any dust or moisture falls on the transfer paper, it affects the print quality and you get a low-quality, dull and in extreme cases, a blurry image.

### **05. Caution! With refillable ink cartridges:**

The best printing products don't just begin and end with ink. For the best quality output, you need to ensure that your ink cartridges are well filled with the right outputs. If you are using a refillable ink cartridge, you should be very careful while refilling it. There are two types of contaminants that can cause issues in sublimation printing machines: Dust and air bubbles. Dust can get into the ink cartridge through dusty floors and wind from an open window or window ACs. When dust gets into the ink cartridge, then everything is spoiled.

Additionally, besides poor print quality, it may cause the ink delivery system of your sublimation printing machines to choke and damage. Likewise, air bubbles can also lead to printing disasters when you manually fill ink cartridges. The best way to prevent air bubbles by filling ink in small volumes and shaking it up to settle and remove any air voids or bubbles.
